

Portfolio Project — Requirements (Phase 1)

Overview

A personal full-stack portfolio project with a public-facing site and an admin panel to manage content. Built to demonstrate real-world React + Laravel + MySQL skills.

Tech Stack

Frontend: React (Vite) + Tailwind CSS

Backend: Laravel (REST API)

Database: MySQL

Auth: Laravel Sanctum (single admin user)

Architecture rule: React never talks to MySQL directly — always via Laravel REST API.

React → REST API → Laravel → MySQL

Language

English only (no i18n needed).

Public Portfolio (no login required)

Navbar

Home, About, Skills, Experience, Education, Projects, Services, Certifications, Achievements, Contact

Sections

Hero

About

Skills

Experience

Education

Projects (Home) — shows only **top 3 featured projects** + a "View All Projects" button

Services

Certifications

Achievements

Social Profiles (links)

Contact — form, submissions stored in DB only (no email notification for now)

Footer

Resume — visitor can download admin-uploaded PDF

Additional Routes

`/projects` — full list of all projects

`/projects/:id` — project details page (full summary/description + external project link)

Admin Panel (authenticated, single admin)

Login (Sanctum-based)

Dashboard

Personal information management

CRUD modules:

Skills

Experience

Education

Projects (includes a "featured" flag/order for homepage top-3 logic)

Services

Certifications

Achievements

Social Profiles

Resume management (upload/replace PDF)

Messages (view contact form submissions — read only, from DB)

Settings

Image uploads supported (project screenshots, profile picture)

Out of Scope (for now)

Multi-language support

Email notifications for contact form

Multiple admin accounts / roles

Development Order (recap)

Requirements → Architecture → Database Design → Laravel Backend → API Development → React Frontend → Public Portfolio → Admin Auth → Admin Panel → Integration → Testing → Security → Optimization → Deployment
