## SUMMARY

**Full Stack Developer** and **Web Developer** with 6+ months of combined internship and professional experience building production-grade web applications using **Laravel**, **PHP**, **React.js**, **MySQL**, and **RESTful APIs**. Currently working as a **Junior Software Developer** at Kush IT World (July 2026 – Present), delivering **backend API development**, **ERP system** modules, and **full stack web solutions**. Skilled in **MVC architecture**, **Eloquent ORM**, **role-based access control (RBAC)**, **responsive web design**, **API testing** with Postman, and **version control** with Git. Adaptable to startup, scale-up, MNC, and consulting firm environments with strong **problem-solving**, **agile workflow**, and **cross-functional team** collaboration skills.

## EDUCATION

- Bachelor of Technology – Computer Science and Engineering (Artificial Intelligence)** *CGPA: 8.00 | 2022 – 2026*  
Quantum University, Roorkee
- UP Board – Class XII** *75% | 2021 – 2022*  
Janta Inter College, Behat

## KEY ACHIEVEMENTS

- Reduced **API response time** by **~35%** through Laravel eager loading and MySQL query optimization in production.
- Built **15+ RESTful API endpoints** tested and validated via **Postman** with zero post-deployment errors.
- Decreased UI code duplication by **40%** via reusable **React.js components** in a live internship project.
- Delivered **ERP backend modules** handling **role-based access control** for 3 user tiers in a professional environment.

## WORK EXPERIENCE

### •Junior Software Developer | Kush IT World

- Full Stack Web Development – Laravel, PHP, MySQL, React.js, REST API, Postman* July 2026 – Present
- Working as a **Junior Software Developer** building and maintaining production-grade **full stack web applications** using **Laravel** (back-end), **PHP**, **MySQL**, and **React.js** (front-end) in a professional team environment.
  - Designed and developed **RESTful API endpoints** (GET, POST, PUT, DELETE) for **ERP system** modules using **Laravel** – implementing **Eloquent ORM** relationships, request validation, and structured JSON responses consumed by the front-end.
  - Implemented **role-based access control (RBAC)** using **Laravel middleware** and policies, securing module-level access across **3 user tiers** (Admin, Manager, Staff) within the ERP system.
  - Optimized **MySQL database queries** with indexing, eager loading, and JOIN restructuring – reducing average **API response time** by **~35%** across high-traffic ERP data endpoints.
  - Performed comprehensive **API testing** using **Postman** – created collections, environment variables, and automated test scripts ensuring all endpoints met functional requirements before production deployment.
  - Collaborated in an **agile** development team using **Git (version control)** with feature-branch workflow and pull request reviews – maintaining clean, reviewable commit history across all development sprints.
  - Integrated **Laravel authentication** (Sanctum token-based and session-based) for secure API access and **CSRF protection** across all web routes in the application.

### •Web Developer Intern | CodSoft (Remote)

- Full Stack Web Development – React.js, Laravel, PHP, MySQL, Postman* July 2024 – August 2024
- Built **3+ full stack web applications** end-to-end as a **Web Developer** using **React.js** (front-end) and **Laravel/PHP** (back-end), delivering responsive, production-ready solutions in an **agile** remote team environment.
  - Developed **reusable React.js components** and managed application state, reducing UI code duplication by **~40%** and improving front-end maintainability across projects.
  - Built and consumed **RESTful APIs** connecting React.js front-end with **Laravel** back-end; validated all endpoints via **Postman**, achieving zero post-integration **API** errors.
  - Designed and optimized **MySQL database schemas** (indexing, foreign keys) improving query execution speed by **~40%** on high-frequency joins.
  - Implemented **cross-browser compatible, mobile-first responsive UI** using **Tailwind CSS** and **Bootstrap** – tested across Chrome, Firefox, and Safari.

## PROJECTS

### •ERP Management System | Laravel, PHP, MySQL, REST API, Postman, RBAC

- Backend API development for a multi-module Enterprise Resource Planning system with role-based access and structured data management.*
- Architected and developed **20+ RESTful API endpoints** across ERP modules (Inventory, HR, Billing) using **Laravel MVC** – implementing **Eloquent ORM** relationships (hasMany, belongsTo, hasManyThrough) for clean, maintainable **backend API development**.
  - Built granular **role-based access control (RBAC)** using **Laravel middleware**, gates, and policies – restricting module-level routes across Admin, Manager, and Staff roles with zero privilege-escalation vulnerabilities.
  - Designed a normalized **MySQL schema** (8+ relational tables) with composite indexes, foreign key constraints, and optimized JOIN queries – reducing average data retrieval time by **~40%** under concurrent load.

- Integrated **Laravel Sanctum** for token-based **API authentication** securing all protected endpoints; implemented request validation (Form Requests) with structured error responses for all 20+ API routes.
- Performed complete **API testing** using **Postman** - built test collections with environment variables, pre-request scripts, and response assertions; achieved **100% endpoint coverage** before handoff.
- Applied **Laravel Artisan** (migrations, seeders, custom commands) to automate database setup and test data generation - reducing environment setup time by ~**60%** across team members.

•**Dynamic News Portal | React.js, Laravel, PHP, MySQL, REST API, Tailwind CSS, Bootstrap**

*Production-grade full stack web application with admin dashboard, user authentication, RBAC, and dynamic content management.*

- Delivered a complete **full stack web application** - **React.js front-end** (10+ reusable components) consuming **Laravel RESTful APIs** (15+ endpoints) as the back-end, following **component-based architecture** for scalable **web development**.
- Designed a fully **responsive web design** using **Tailwind CSS** and **Bootstrap** with mobile-first approach - verified **cross-browser compatibility** across Chrome, Firefox, and Edge.
- Implemented **user authentication** (register, login, email verification, password reset) with **JWT/session management** and **CSRF protection**; built full **CRUD operations** for articles, categories, and users with server-side pagination.
- Applied **web performance optimization** (Eloquent eager loading) - resolved N+1 query issues, cutting database calls from 40 to 6 and reducing page load time by ~**30%**.
- Validated all **API endpoints** with **Postman** before front-end integration and managed entire codebase via **Git version control** with feature-branch workflow.

**TECHNICAL SKILLS**

**Frameworks:** **Laravel** (primary), **React.js**, **Bootstrap**, **Tailwind CSS**  
**Back-End & API Development:** **PHP**, **RESTful API** Design, **Backend API Development**, **MVC Architecture**, **Eloquent ORM**, **Blade Templating**, **CRUD Operations**, **RBAC**, **Middleware**, **Laravel Sanctum**, **Artisan CLI**, **Composer**  
**Front-End Development:** **React.js**, **HTML5**, **CSS3**, **JavaScript** (ES6+), **jQuery**, **Responsive Web Design**, **Cross-Browser Compatibility**, **Component-Based Architecture**  
**Databases:** **MySQL** - **Schema Design**, **Indexing**, **Joins**, **Foreign Keys**, **Query Optimization**, **Migrations**, **Seeders**  
**API Testing & Tools:** **Postman** (Collections, Environments, Assertions), **Git**, **GitHub (Version Control)**, **VS Code**, **npm**, **Node.js**, **Laravel Debugbar**  
**Authentication & Security:** **Laravel Sanctum**, **JWT**, **Session Management**, **CSRF Protection**, **Input Validation**, **Role-Based Access Control**  
**Web Performance:** **Eager Loading**, **Query Optimization**, **Caching**, **Code Splitting**, **Debugging**, **Browser DevTools**  
**Programming Languages:** **PHP** (primary), **JavaScript** (ES6+), **Python**, **Java**, **C**  
**Methodologies:** **Agile**, **Feature-Branch Git Workflow**, **Pull Request Reviews**, **Debugging**, **Unit Testing Basics**  
**Relevant Coursework:** **Data Structures & Algorithms**, **OOP**, **DBMS**, **Software Engineering**  
**Soft Skills:** **Problem Solving**, **Self-learning**, **Adaptability**, **Team Collaboration**, **Attention to Detail**
